

OPTICS (Online Permit to Work Interactive Control System)

Manage simple to complex worksites, enforce rules and monitor compliance. Meets and exceeds Nigerian and International regulatory requirements (DPR, Oil industry Group etc). Needed for complex worksite management and administration – Construction sites, Pipe laying activities and any activity with potentially high risk. Designed for PTW (Permit to Work) Administration and control.

Details

For organisations where SAFETY is a priority and efficiency is valued, worksite hazard management is key to **reducing** incidents and fatalities and **OPTICS** provides a system for managing worksite hazards and demonstrating compliance and improvement.

OPTICS is an enterprise application system for managing PTWs. **OPTICS** can scale from a single work location to a multi facility multi activity work place (e.g. Operational oil terminal/Tankfarm undergoing a massive upgrade.)

OPTICS allows users to raise and monitor PTW online. **OPTICS** provides functionalities such as: Job Hazard Analysis (JHA) system for managing workplace hazards; online access via graphical display to overall worksite status, site activities monitoring by remote workstations and an overview of work ongoing at a location or across the company

The system handles the approval process, closure, revalidation, work stoppage, suspension and cancellations. Permits can be extended and monitored and all complimentary permits are handled and raised from within the system.

OPTICS is multi-user, and can be integrated with other tools (IPCAM, Smartcard) to give a seamless overview of worksite and PTWs administration.

With **OPTICS**, your workforce can *actually*

implement the PTW system and have control over ongoing work.

Typical Usage:

Administration of PTW system.

Worksite control

Perform risk assessment;

Remote monitoring and administration system for worksites;

Compliance demonstration (to legislation and internal standards)

Costing:
